Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

N.Alternate mames: pregastric esterase
C;Species: Bos primigenius taurus (cattle)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change 10-Sep-1999
C;Accession: JC4017; S64678
R;Timmermans, M Y.J.; Teuchy, H.; Kupers, L.P.M.
Gene 147, 259-262, 1994
A;Title: The cDNA sequence encoding bovine pregastric esterase.
A;Title: The cDNA sequence encoding bovine pregastric esterase.
A;Reference number: JC4017; MUID:95011625; PMID:7926811
A;Molecule type: mRNA
A;Molecule type: mRNA

Tulpase cause cholesteryl ester storage disease in unrelated compound in the coordinesteryl ester storage disease in unrelated compound the telecotygous and hemizygous individuals.";

Hum. Mutat. 12:44-51(1998).

- !- FUNCTION: CRICIAL FOR THE INTRACELLULAR HYDROLYSIS OF CHOLESTERYL ESTERS AND TRIGLYCERIDES THAT HAVE BEEN INTERNALIZED VIA RECEPTORMEDIATING THE EFFECT OF LID. (LOW DENSITY LIPOPROTEIN) UPTAKE ON SUPPRESSION OF HYDROXYMETHYLGLUTARRYL CAR REDUCTASE AND ACTIVATION OF ENDOCENOUS CELLULAR CHOLESTERYL ESTER FORMATION.

C. CATALYTIC ACTIVITY: A steryl ester + H(2)O = a sterol + a fatty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DISEASE: DEFECTS IN LIPA ARE THE CAUSE OF THE SEVERE INFANTILE-
NOSET WOLMAN DISEASE (WD) AND THE MILDER LATE-ONSET CHOLESTERYL
ESTER STORAGE DISEASE (CESD).
SIMILARITY: BELONGS TO THE ABHYDROLASE SUPERFAMILY. LIPASE FAMILY.

TISSUE SPECIFICITY: Expressed at low levels in most tissues. High level expression is found in hepatcoytes and splenic and thymic cells. Very high level expression is observed in cells of the small intestinal villi, the zona fasciculata and reticularis of the adrenal cortex, pancreatic acini, and renal tubular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: BELONGS TO THE ABHYDROLASE SUPERFAMILY.
